Method 22 Visible Emission Monitoring

Method 22 visible emission monitoring is required for:

- Welding operations, if the facility-wide usage of MFHAP-containing² welding rod or wire is 2,000 pounds or more, annually.
- Dry abrasive blasting of objects over 8 feet in any dimension, if blasting is done without a filtration control device and MFHAP are emitted.

Check the box below that best applies to your facility:

- Method 22 visible emissions monitoring is not required for this facility.
- Method 22 visible emissions monitoring is required for this facility and visible emissions were not present during this annual reporting period. (Visible emissions are considered to be present if they are detected for more than six (6) minutes of the fifteen (15) minute observation period).
- Method 22 visible emissions monitoring is required for this facility and visible emissions were present during this annual reporting period. The following information is included with this report:
 - All dates on which Method 22 visible emissions were found to be present;
 - A description of the corrective actions taken subsequent to the observation of visible emissions; and
 - The date and results of follow-up Method 22 visible emissions monitoring performed after the corrective actions. **Note:** For welding operations, if visible emissions are found to be present more than once per year, additional reporting documentation is required. Contact Linn County Public Health for additional guidance, if necessary.

² MFHAP means any compound of the following metals: cadmium (Cd), chromium (Cr), manganese (Mn), nickel (Ni), or any of these metals in elemental form (with the exception of lead).
